TITLE : OILY SOLID COSMETIC

ABSTRACT : PROBLEM TO BE SOLVED: To provide an oily solid cosmetic having good usability, capable of giving excellent luster after applied to the skin, and capable of excellently keeping an effect of preventing secondary adhesion and a cosmetic effect.

SOLUTION: This oily solid cosmetic contains the following components (a) to (c): (a) a fluorine-modified silicone; (b) an acrylic silicone-based graft copolymer which is obtained by copolymerizing an organopolysiloxane compound having a radical-polymerizing group at one of its polymer chain ends with a radical-polymerizing monomer consisting mainly of a 16-22C alkyl(meth) acrylate; and (c) a volatile silicone. The cosmetic preferably contains the components (a), (b), and (c) in amounts of 1-40 wt.%, 0.5-40 wt.%, and 0.1-40 wt.%, respectively. Further, the cosmetic preferably contains a silicone resin as the other component (d). The cosmetic is preferably used as a lipstick.
